ONLINE TRAIN BOOKING SYSTEM

Web Application

A PROJECT REPORT

Submitted in partial fulfillment of the Requirements For the award of Master of Computer Application Degree

RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA BHOPAL (M.P.)

MINOR PROJECT REPORT

Submitted by Group No. - 34

1.Adarsh Kumar (0103CA241020)
2.Gautam Kumar Pandey (0103CA241101)
3.Lokesh Kumar Panjiyar (0103CA241137)

Under the Guidance of

Prof. Abhishek Dubey

MASTER OF COMPUTER APPLICATION
LAKSHMI NARAIN COLLEGE OF TECHNOLOGY (MCA) BHOPAL

JULY-DECEMBER, 2025

LAKSHMI NARAIN COLLEGE OF TECHNOLOGY (MCA), BHOPAL

MASTER OF COMPUTER APPLICATION

CERTIFICATE

This is to certify that the work embodied in this Minor project, "Online train booking system " has been satisfactorily completed by Adarsh Kumar (0103CA241020), Gautam Kumar Pandey (0103CA241101) and Lokesh Kumar Panjiyar (0103CA241137). It is a bonafide piece of work, carried out under our / my guidance in the Master of Computer Application, Lakshmi Narain College of Technology Bhopal for the partial fulfillment of the Master of Computer Application degree during the academic session July-December, 2025.

Guided By Prof. Abhishek Dubey

Approved By Head of Department

Forwarded by Director Lakshmi Narain College of Technology (MCA), Bhopal

LAKSHMI NARAIN COLLEGE OF TECHNOLOGY (MCA), BHOPAL

MASTER OF COMPUTER APPLICATION

CERTIFICATE OF APPROVAL

This foregoing Minor project is hereby approved as a creditable study of a Computer Application Subject carried out and presented in a manner satisfactory to warranty its acceptance as a prerequisite to the degree for which it has been submitted. It is understood that by this approval the undersigned do not necessarily endorse or approve any statement made, opinion expressed or conclusion drawn therein, but approve the thesis only for the purpose for which it has been submitted.

(Internal Examiner) **(External Examiner)**

LAKSHMI NARAIN COLLEGE OF TECHNOLOGY (MCA), BHOPAL

MASTER OF COMPUTER APPLICATION

DECLARATION

We, **Adarsh Kumar (0103CA241020), Gautam Kumar Pandey (0103CA241101) and Lokesh Kumar Panjiyar (0103CA241137),** the students of Master of Computer Application, Lakshmi Narain College of Technology, Bhopal hereby declare that the work presented in this Minor Project is outcome of our own work, is bonafide, correct to the best of our knowledge and this work has been carried out taking care of Engineering Ethics. The work presented does not infringe any patented work and has not been submitted to any University for the award of any degree or any professional diploma.

Adarsh Kumar (0103CA241020) _____

Gautam Kumar Pandey (0103CA241101) _____

Lokesh Kumar Panjiyar(0103CA241137) _____

Date: __ /__ /__

ACKNOWLEDGMENT

We would like to express our sincere gratitude to all those who have contributed to the successful completion of this Minor Project on "Online train booking system".

First and foremost, weexpressourdeepsenseof gratitude to our project guide, Prof. Abhishek Dubey, for his/herinvaluableguidance,continuous support, and encouragement throughout the developmentofthisproject.His/Her expertise and constructive feedback were instrumental in shapingthisproject.

We are extremelygratefultotheHeadofDepartment, Master of Computer Application, Lakshmi NarainCollegeofTechnology,Bhopal, for providing us with the necessary facilities and resourcesrequiredforthecompletionofthis project.

We extendourheartfeltthankstotheDirector,Lakshmi Narain College of Technology (MCA), Bhopal,forprovidinganexcellentacademic environment and infrastructure that facilitatedourlearningandprojectdevelopment.

We wouldalsoliketothankallthefacultymembers of the MCA department who have directlyorindirectlyhelpeduswiththeirvaluable suggestions and moral support during the course of this project.

We arethankfultoourparentsandfamilymembers for their constant encouragement and support throughout our academic journey.

Last butnotleast,weacknowledgethecontributions of our fellow students who provided valuablefeedbackduringthetestingphaseofour application and helped us improve the user experience.

Adarsh Kumar,Gautam Kumar Pandey and Lokesh Kumar Panjiyar

Master of Computer Application (MCA) - Vision and Mission

Vision and Mission of the Institution

Vision

To be a premier institute where globally competent computer professionals, innovators, and entrepreneurs are evolved with patriotism and nurtured ethical values.

Mission

- To offer high-grade, value-based Post-graduate Programmes in the field of Computer Applications.
- To improve continually in the teaching-learning process by strengthening infrastructural facilities and faculty credentials.
- To provide conducive environment to achieve excellence in teaching-learning, and research & development activities.
- To incorporate IT professionals and skill based courses beyond curriculum to create more employable post-graduates.
- To provide appropriate forums to develop innovative talents, practice ethical values and inculcate as enduring learners.

Master of Computer Application (MCA)

Programme Outcomes (POs): On completion of MCA Course, the Post-Graduates will be able to:

PROGRAMME OUTCOMES	
PO-1	Apply the knowledge of computing fundamentals, computing models, and mathematics to real life applications.
PO-2	Design and develop models to analyze and solve computer science related problems using principles of mathematics and computing sciences.
PO-3	Design and develop applications and/or system components for any desired needs with appropriate considerations for health care & security benefits, societal aspects and environmental sustainability.
PO-4	Analyze and review research based knowledge and state of the art to design, interpret and conclude from the resulting data.
PO-5	Create, adapt, and apply modern computing tools efficiently to computer applications with the understanding of limitations.
PO-6	Work and solve problems with a professional context pertaining to ethics, social, and cyber regulations.
PO-7	Involve in perpetual learning for a continued career development and progress as a computer professional.
PO-8	Act efficiently both as a team leader and team member on multi-disciplinary environment to apply knowledge and understanding of computing and management skills.
PO-9	Communicate and present technical information effectively in oral and written reports to computing community.
PO-10	Utilize computing knowledge efficiently in professional computing practices relevant to local and global contexts for societal, environmental, cultural and security aspects.
PO-11	Function competently as an individual, and as a member or leader in multidisciplinary projects.
PO-12	Create and design innovative methodologies to solve problems, and apply inherent skills as an entrepreneur to create value and wealth for the betterment of the individual and society.

Lakshmi Narain College of Technology (MCA), Bhopal

Master in Computer Applications (MCA)

Program Educational Objectives (PEOs)

PEO-1: To evolve post-graduates having a strong background of algorithm designs, database creations, programming concepts and ability to use in applications.

PEO-2: To evolve post-graduates who can demonstrate technical competence in the field of Computer Applications, Artificial Intelligence & Data Science develop solutions to the complex problems benefitting society and environment.

PEO-3: To evolve post-graduates having professional competence through life-long learning such as advanced degrees, professional skills and other activities related to globally to computer applications & society.

PEO-4: To evolve post-graduates who function effectively, individually and in group, in a multi-disciplinary environment within a societal and environmental context.

PEO-5: To evolve post-graduates who would be able to take individual responsibility and work as a part of team towards the fulfillment of both individual and organizational goals.

1. INTRODUCTION Rail transport is one of the important modes of transport in India. Now a days we see that there are railways that are present for the long as well as short distance travelling which makes the life of the people easier. When compared to other means of transport, a railway is the cheapest means of transport. The maintenance of the railway database also plays a major role in the smooth running of this system. The Online Train Ticket Management System will help in reserving the tickets of the railways to travel from a particular source to the destination.

This website has various kinds of information that helps regarding booking of tickets via railways.

Users will be able to search the train availability, the exact fare, the arrival and departure time of the train and they can also book the ticket by using the debit, credit or master card and after booking the ticket if the user wants to cancel it then they can easily do it also.

This system is designed to provide the facility where the customer can easily book tickets online.The main advantage of this project is here customer don't have to stand in long queues for buying a ticket. Customer can purchase ticket through online anytime. This Train Ticket Booking System is the mini project developed using java and MySQL.

The customer needs to register to the website before booking train ticket. Customer can book the ticket, view previous transaction, print ticket receipt after the login. The passenger can select source location and destination location to book the train ticket. While booking ticket the system asked payment card details for transaction.

1.1 SURVEY

Railway passengers frequently need to know about their ticket reservation status, ticket availability on a particular train or for a place, train arrival or departure details, special trains etc. Customer information centers at the railway stations are unable to serve such queries at peak periods.
The number of the reservation counters available to the passengers and customers are very less.

On most of the reservation systems there are long queues, so it takes a long time for any individual to book the ticket.
As now there are no call centers facilities available to solve the queries of the passengers.
The online railway ticket reservation system aims to develop a web application which aims at providing trains details, trains availability, as well as the facility to book ticket in online for customers.

So, we thought of developing a web-based application which would provide the users all these facilities from his terminal only as well as help them in booking their tickets.
We decided to give the name of the website "ONLINE TRAIN TICKET MANAGEMENT SYSTEM". The online railway ticket reservation system is developed using JSP.NET with Eclipse Jee 2018-2009 as the backend in the .NET Framework.

1.2 OBJECTIVES

The objective of theonline railway ticketreservation system Projectis to designsoftware to fully automate the process ofissuing a railway ticket.
That is:-

1.To search the trains it's arrival and departure time, distance between source and destination.
3. To check the availability of the ticket.
4. To calculate fare.
5. To book the ticket.
6. To cancel the ticket if necessary.
7. Passenger can check the history of booking by using their username and Password.
8. A modern approach of booking.
9. Greater sales and marketing.
10. It will save time of the passengers as it is an online application.

1.3 ANALYSIS

Online railway ticket reservation is a online train ticket management website, which is capable of booking ticket and search the train availability. This website is mainly created to fulfill the following requirements, it comprises of the following properties: -

- o A central database that will store all information.
- o An online website that will provide real- time information about the availability of tickets their prices.
- o Every registered user is able to view his booking id that has been made in his/her name.
- o Every registered user can change his password any time he wants to change.
- o Every guest user can search train availability, price of the ticket, arrival and departure time, distance between source and destination etc.
- o Every registered user has the facilities to print his ticket any time he wishes.

1.4 METHODOLOGY:

An important aspect of modeling is its role as a communication tool in determining requirements. For users what they require, and whether the current system satisfying their requirements. As we go through the project, we found out train details, train timing, seat availability, booking history of the user. We visit them in different time to book train tickets and check their availability, timing as per requirements. Though all of the requirements are not same but we tried out to make an interface among their requirements.

2. INITIAL INVESTIGATION

2.1 Existing system study

Various problems of physical system are described below: -

Railway passengers frequently need to know about their ticket reservation status, ticket availability on a particular train or for a place, train arrival or departure details, special trains etc.

- Customer information centers at the railway stations are unable to serve such queries at peak periods.
- On most of the reservation systems there are long queues, so it takes a long time for any individual to book the ticket.
- As now there are no call centers facilities available to solve the queries of the passengers.

3. FEASIBILITY STUDY

Feasibility is defined as the practical extent to which a project can be performed successfully. To evaluate feasibility, a feasibility study is performed, which determines whether the solution considered to accomplish the requirements is practical and workable in the software. Information such as resource availability, cost estimation for software development, benefits of the software to the organization after it is developed and cost to be incurred on its maintenance are considered during the feasibility study. The objective of the feasibility study is to establish the reasons for developing the software that is acceptable to users, adaptable to change and conformable to established standards. Various other objectives of feasibility study are listed below.

- To analyze whether the software will meet organizational requirements
- To determine whether the software can be implemented using the current technology and within the specified budget and schedule
- To determine whether the software can be integrated with other existing software.

3.1 Types of Feasibility

Various types of feasibility that are commonly considered include technical feasibility, operational feasibility, and economic feasibility.

1. Technical Feasibility.
2. Operational Feasibility.
3. Economic Feasibility.

1. Technical Feasibility.

Technical feasibility assesses the current resources (such as hardware and software) and technology, which are required to accomplish user requirements in the software within the allocated time and budget. Technical feasibility also performs the following tasks.

- Analyzes the technical skills and capabilities of the software development team members
- Determines whether the relevant technology is stable and established
- Ascertains that the technology chosen for software development has a large number of users so that they can be consulted when problems arise or improvements are required.

2. Operational Feasibility.

Operational feasibility assesses the extent to which the required software performs a series of steps to solve business problems and user requirements. Operational feasibility also performs the following tasks.

- Determines whether the problems anticipated in user requirements are of high priority
- Determines whether the solution suggested by the software development team is acceptable
- Analyzes whether users will adapt to a new software
- Determines whether the organization is satisfied by the alternative solutions proposed by the software development team.

3. Economic Feasibility.

Economic feasibility determines whether the required software is capable of generating financial gains for an organization. Software is said to be economically feasible if it focuses on the issues listed below.

- Cost incurred on software development to produce long-term gains for an organization.
- Cost requiredto conduct full software investigation (such as requirements elicitation and requirements analysis)
- Cost of hardware, software, development team, and training.

4. Software requirement specification

A software requirements specification (SRS) is a comprehensive description of the intended purpose and environment for software under development. The SRS fully describes what the software will do and how it will be expected to perform. Software requirement specification (SRS) is a document that completely describes what the proposed software should do without describing how software will do it. The basic goal of the requirement phase is to produce the SRS, whichdescribes the complete behavior of the proposed software. SRS is also helping the clients to understand their own needs.

The ***Software Requirements Specification*** section will deal with the technical details of the proposed system. It will contain information regarding the developmental and operational environments, user interfaces, functional and requirements specifications and the exception and error handling features of the system.

4.1 Advantages

Software SRS establishes the basic for agreement between the client and the supplier on what the software product will do.

•ASRS provides a reference for validation of the final product.
• Ahigh-quality SRS is a prerequisite to high-quality software.
• A high-quality SRS reduces the development cost. ***4.2 Characteristics of an SRS***

•Correct. •Complete. •Unambiguous. •Verifiable. •Consistent. •Rankedforimportanceand/orstability. •Modifiable.
• Traceable.

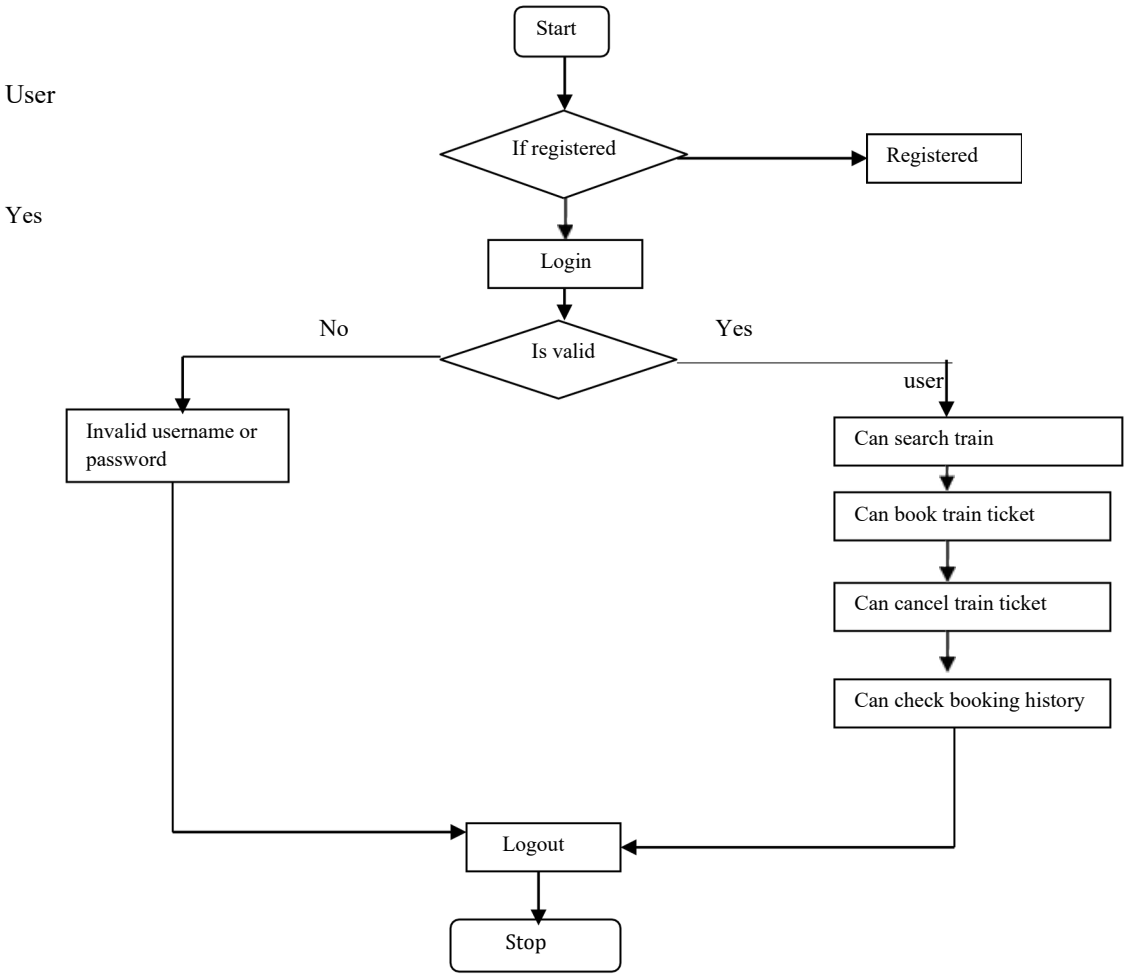

5. Flowchart

A flowchart is a visual representation of the sequence of steps and decisions needed to perform a process. Each step in the sequence is noted within a diagram shape. Steps are linked by connecting lines and directional arrows. This allows

anyone to view the flowchart and logically follow the process from beginning to end.

A flowchart is a powerful business tool. With proper design and construction, it communicates the steps in a process very effectively and efficiently.

SYSTEM FLOW CHART

6. WORKING ENVIRONMENT

6.1 Introduction

Project environment represents a connection, where the project is processed. It impacts the project and is, therefore, conditioned. Such an interaction is provided by numerous factors as operational, physical, ecological, social, cultural, economic, psychological, financial, organizational etc. The environment not only formulates the project but also estimates it.

The project environment analysis is held at the beginning of the project. This method identifies the lobbies and integrates the project stakeholders into project group. All impact factors are analyzed in this analysis: project risks and chances, stakeholders and their interests, measures for the control. The stakeholder type is thereby analyzed. It distinguishes between active and passive type. The first group represents project team and project manager, principal and customer. The second group contains authorities, works council, competitors, persons affected by the project indirectly.

6.2 software requirements for developing and implementing the system

Operating System: -

Software Requirements Operating system: WINDOWS 7, 8 User interface: HTML, CSS Programming language: JSP Database: MY SQL Server: TOMCATE Working Environment:ECLIPSE JEE

Hardware Requirements

Prosser: any

Hard Disk: 10 GB minimum

RAM: 256 MB

Any screen

6.3 DEFINATIONS OF SOFTWARE REQUIREMENTS

ECLIPSE

- Eclipse is famous for java Integrated Development Environment (IDE).

TOMCAT

- It is an application server from the Apache Software Foundation that executes java servlets and renders web pages that include java Server page coding.

JSP

- JSP technology is used to create web application.
- Java Server Pages (JSP) is a server-side programming technology.
- Enables the creation of dynamic, platform-independent method for building Web-based applications.
- A JSP page consists of HTML tags and JSP tags.
- It provides some additional features such as Expression Language, Custom Tags, etc.
- The JSP pages are easier to maintain because we can separate designing and development.

MYSQL

- Standard query language.
- Open Source Relational SQL Database Management System.

- MySQL is one of the best RDBMS being used for developing various web-based software applications.
- It is very commonly used in conjunction with PHP scripts to create powerful and dynamic server-side applications.
- MySQL is quicker than other databases so it can work well even with the large data set.
- MySQL uses a standard form of the well-known SQL data language.

HTML

- Hyper Text Markup Language.
- Most widely used web language.
- HTML was created by Berners-Lee in 1991 .
- "HTML 2.0" was the first standard HTML specification which was published in 1995.
- HTML was developed with the intent of defining the structure of documents like headings, paragraphs, lists.

CSS

- CSS is used to design HTML tags.
- CSS is used to control the style of a web document in a simple and easy way.
- CSS is the acronym for "Cascading Style Sheet"

7. SYSTEM ANALYSIS

Introduction

It is a process of collecting and interpreting facts, identifying the problems, and decomposition of a system into its components.

System analysis is conducted for the purpose of studying a system or its parts in order to identify its objectives. It is a problemsolving technique that improves the

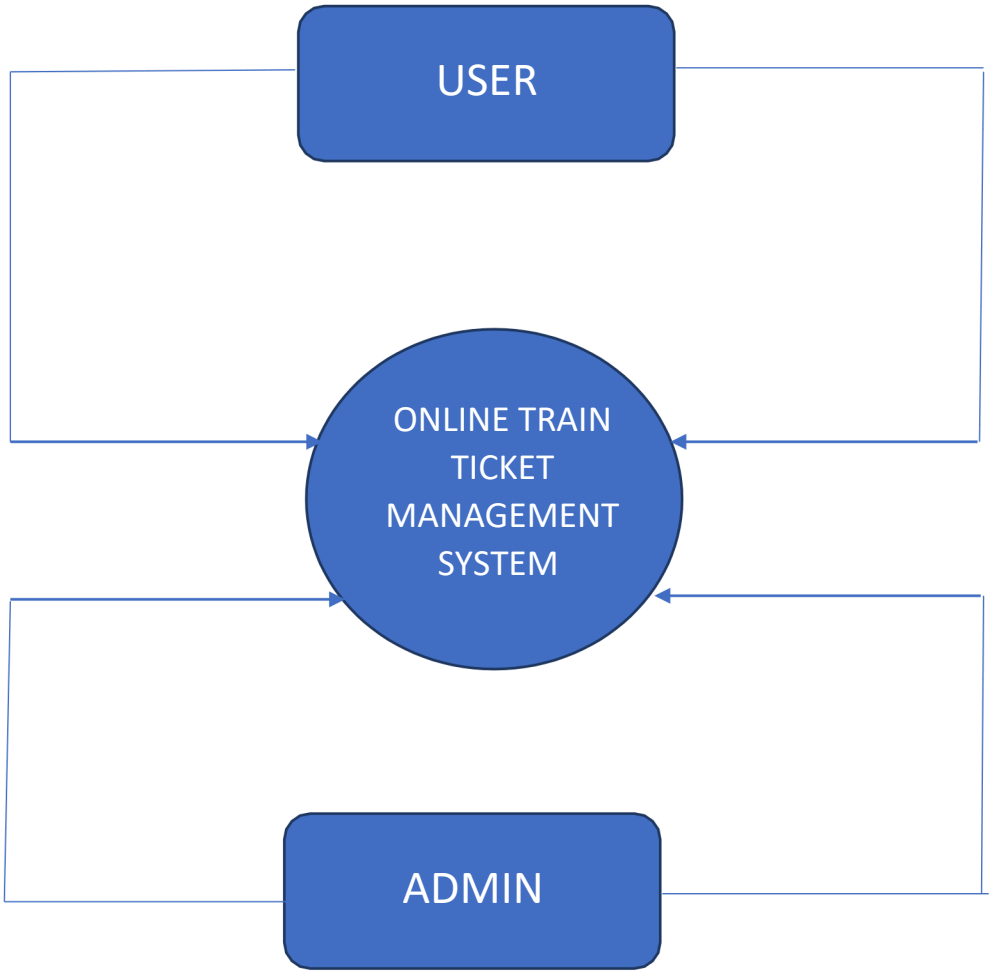

system and ensures that all the components of the system work efficiently to accomplish their purpose.

7.1 DATA FLOW DIAGRAM

A data flow diagram is a way of representing a flow of data of a process or a system. It provides information about the outputs of each entity and the process itself.

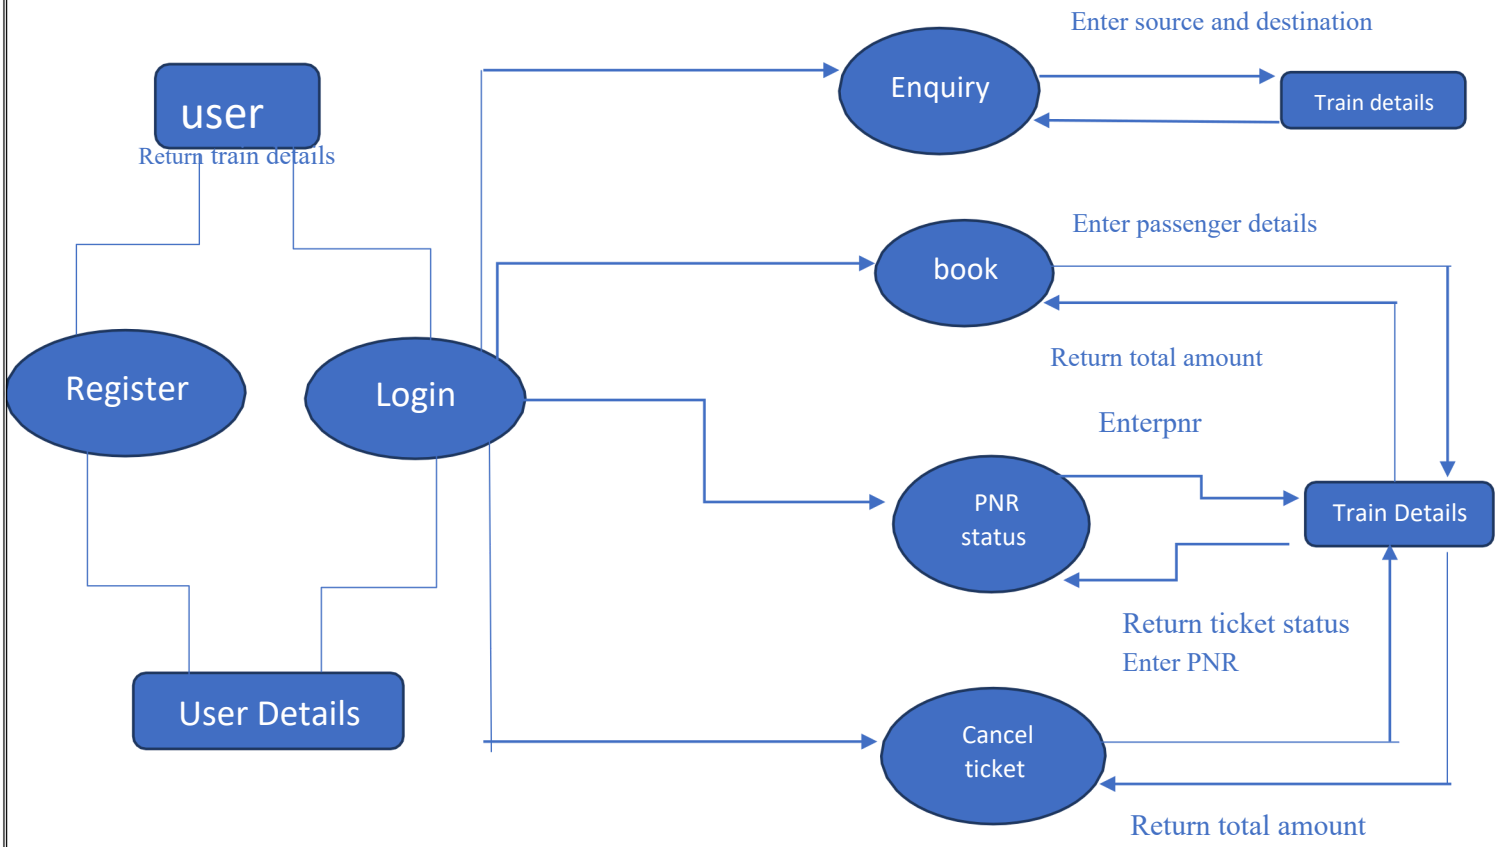

Data flow diagram (LEVEL 0)

DFD Level 0 is also called a Context Diagram. It's a basic overview of the whole system or process being analyzed or modeled.

Data flow diagram (LEVEL 1)

The Level 0 DFD is broken down into more specific, Level 1 DFD. Level 1 DFD depicts basic modules in the system and flow of data among various modules. Level 1 DFD also mentions basic processes and sources of information.

7.2 ENTITY RELATIONSHIP DIAGRAM

Entity relationship diagram displays the relationships of entity set stored in a database. In other words, we can say that ER diagrams helps to explain the logical structure of databases. This model is based on three basic concepts:

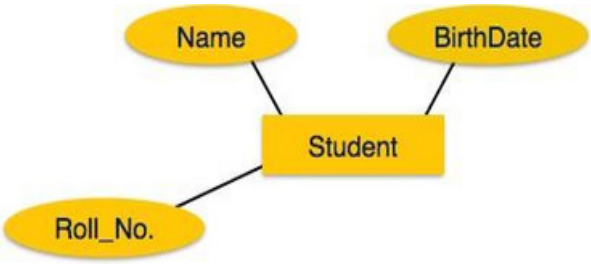

Entities

Entities are represented by means of rectangles. Rectangles are named with the entity set they represent.

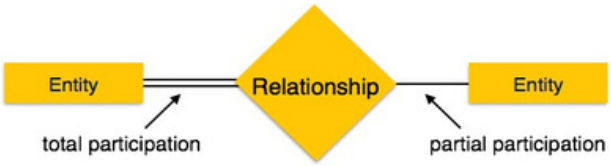

Attributes

Attributes are the properties of entities. Attributes are represented by means of ellipses. Every ellipse represents one attribute and is directly connected to its entity (rectangle).

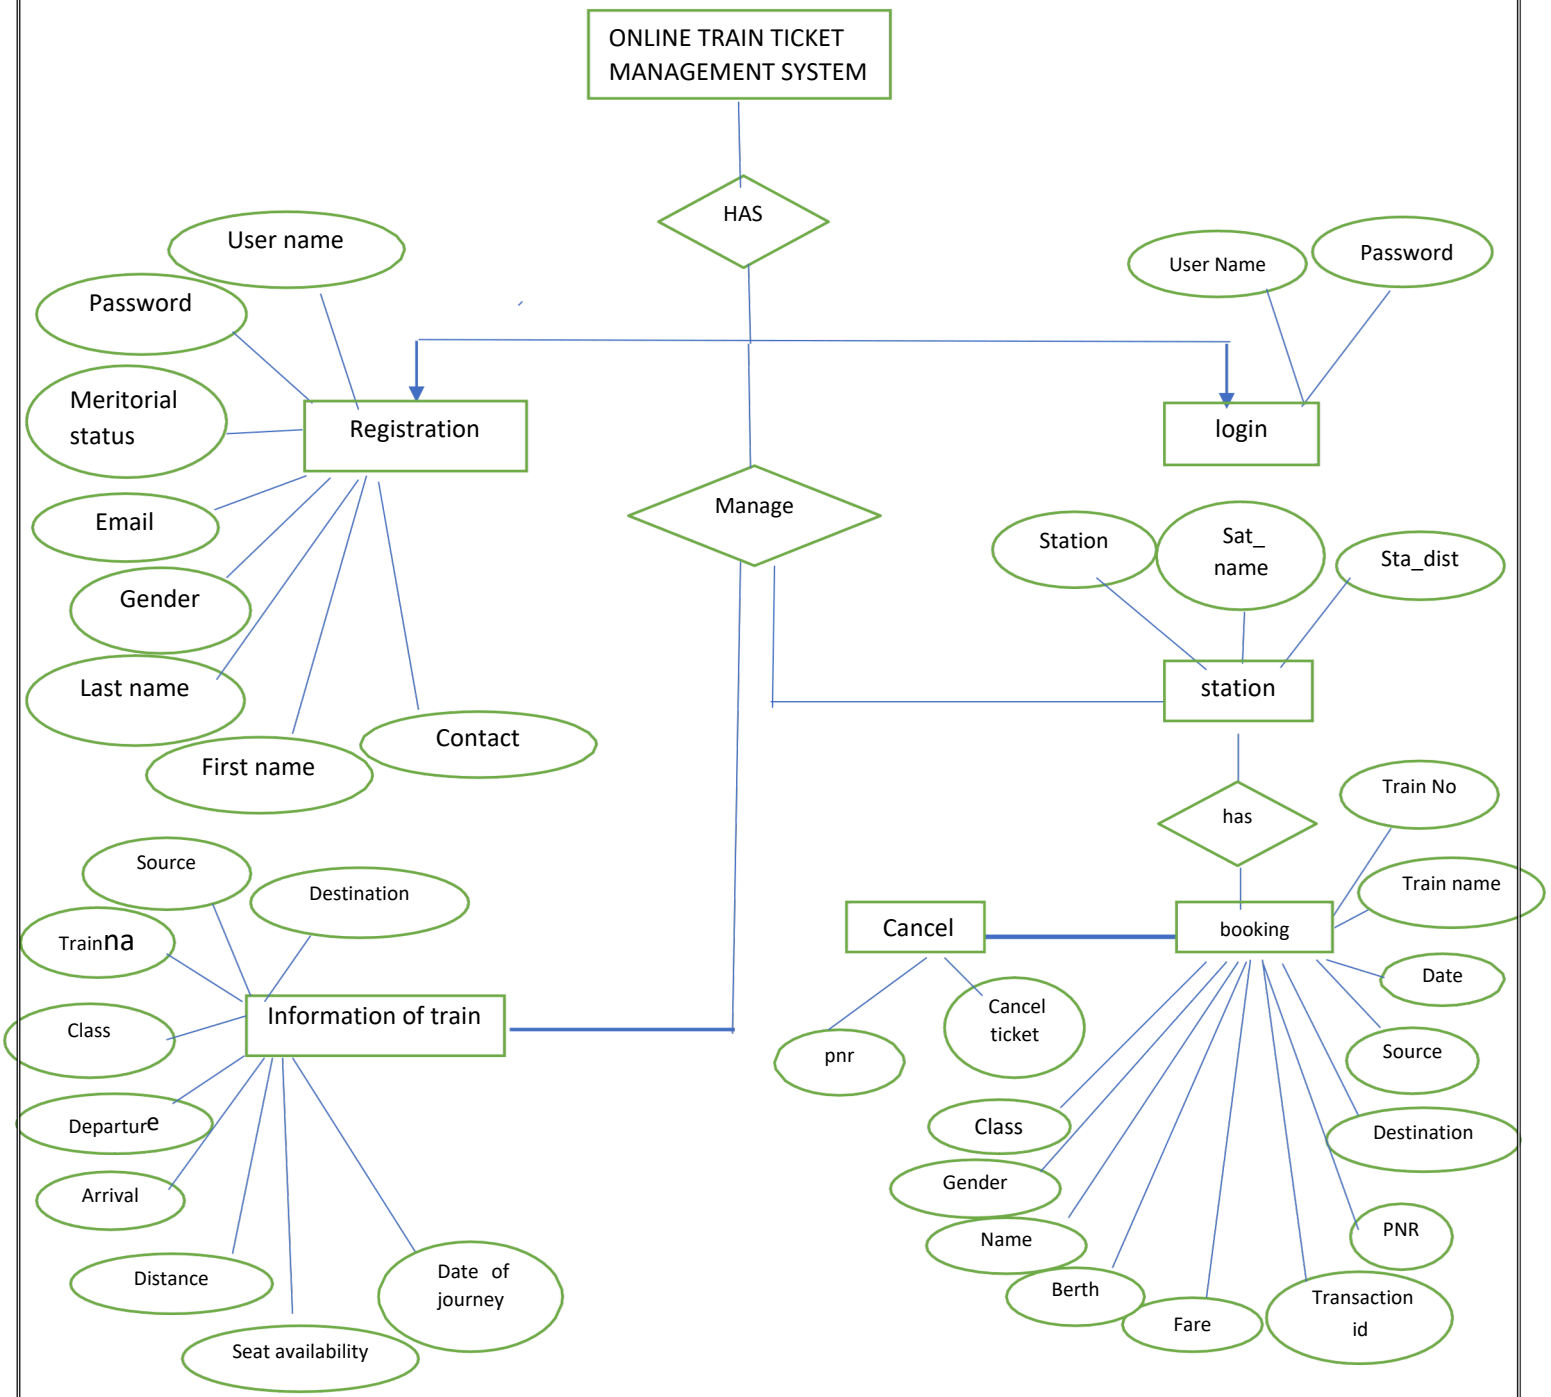

Relationship

Relationships are represented by diamond-shaped box. Name of the relationship is written inside the diamond-box. All the entities (rectangles) participating in a relationship, are connected to it by a line.

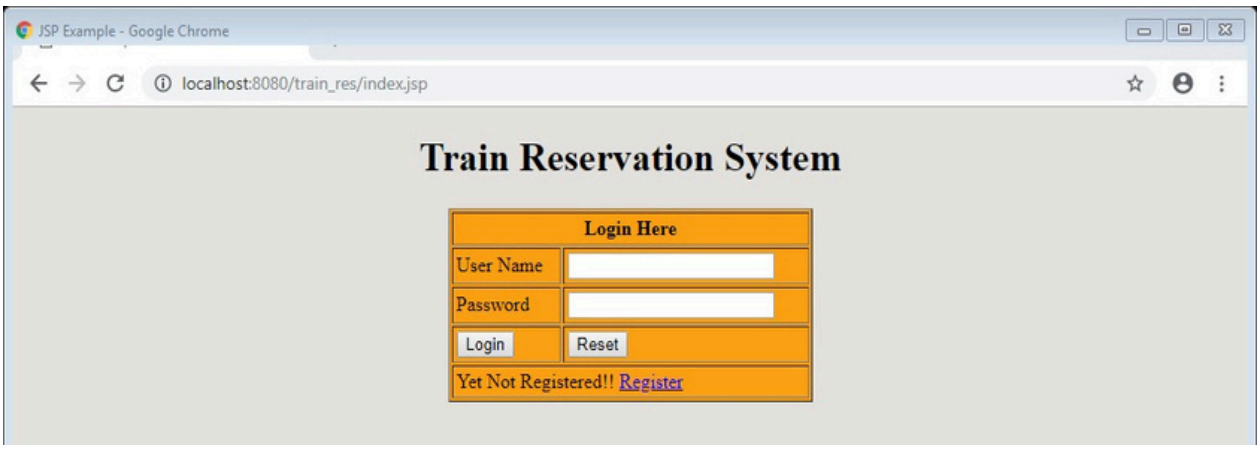

ENTITY RELATIONSHIP DIAGRAM

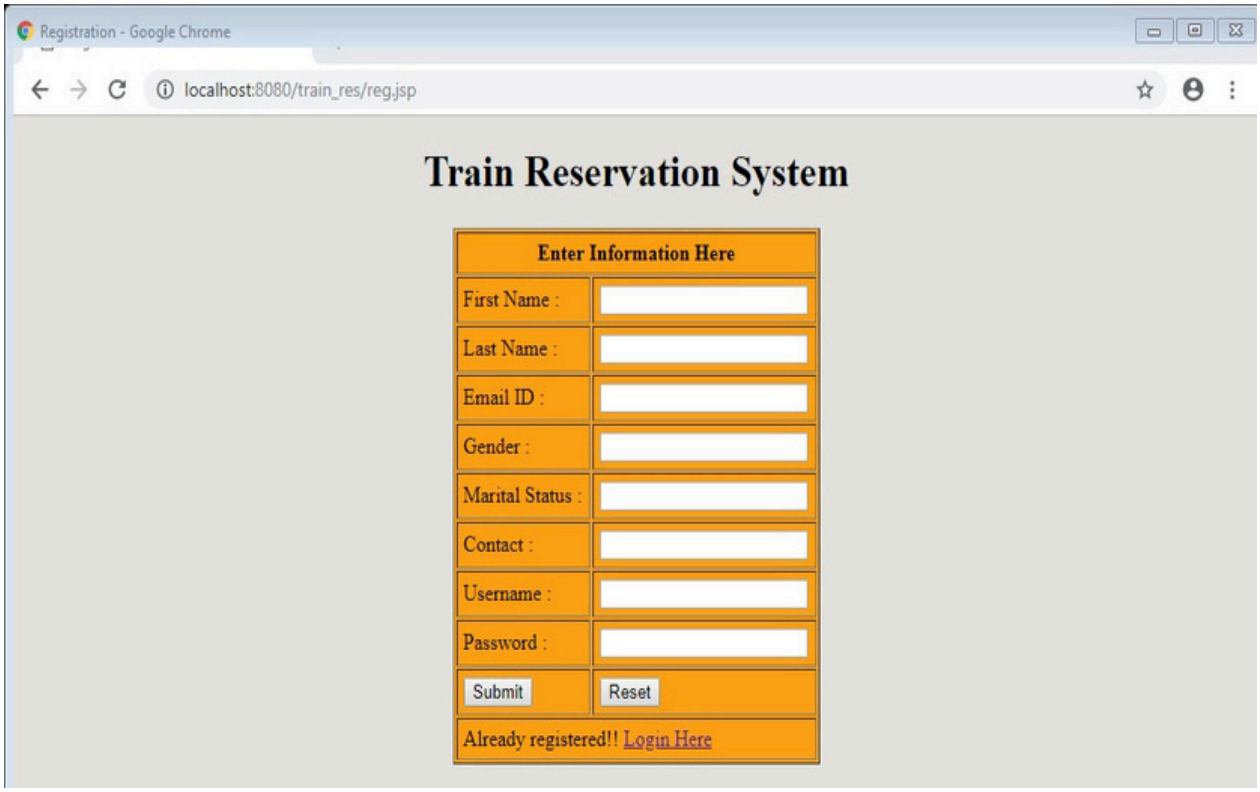

8. SYSTEM DESIGN

8.1 User interface-Screenshot

LOG IN PAGE.

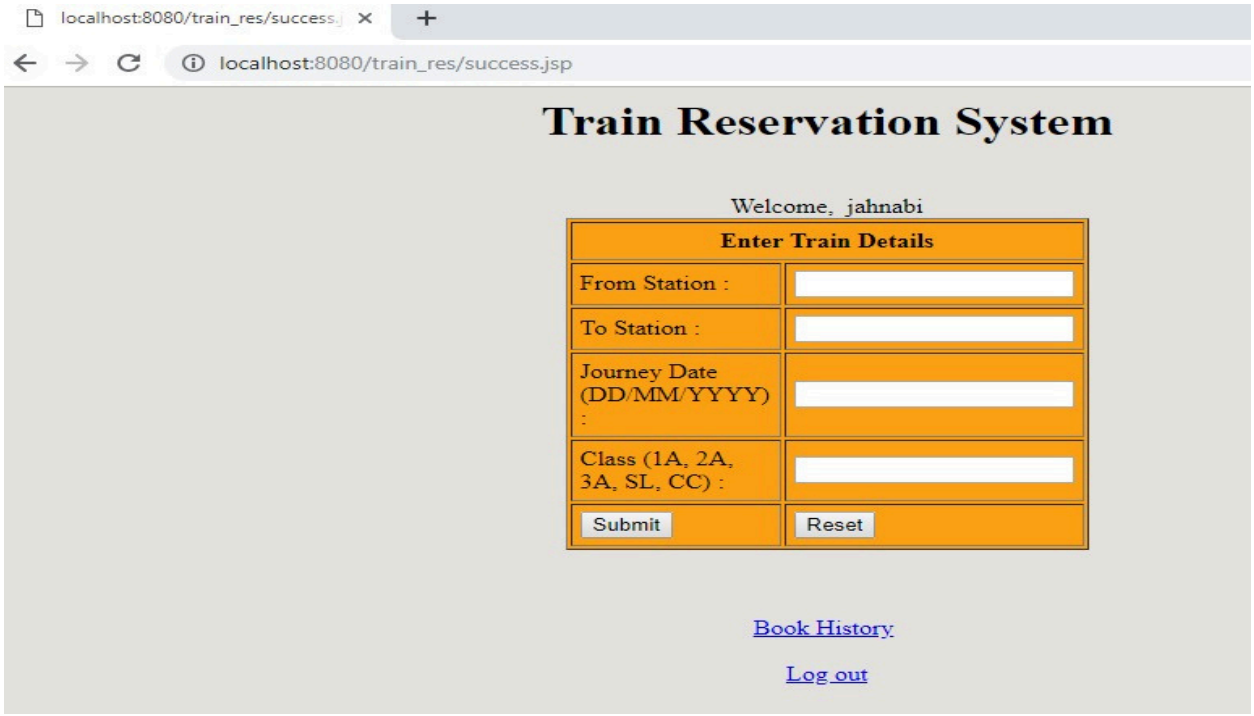

For a new user there is a hyperlink by which user can create a new account

REGISTRATION PAGE

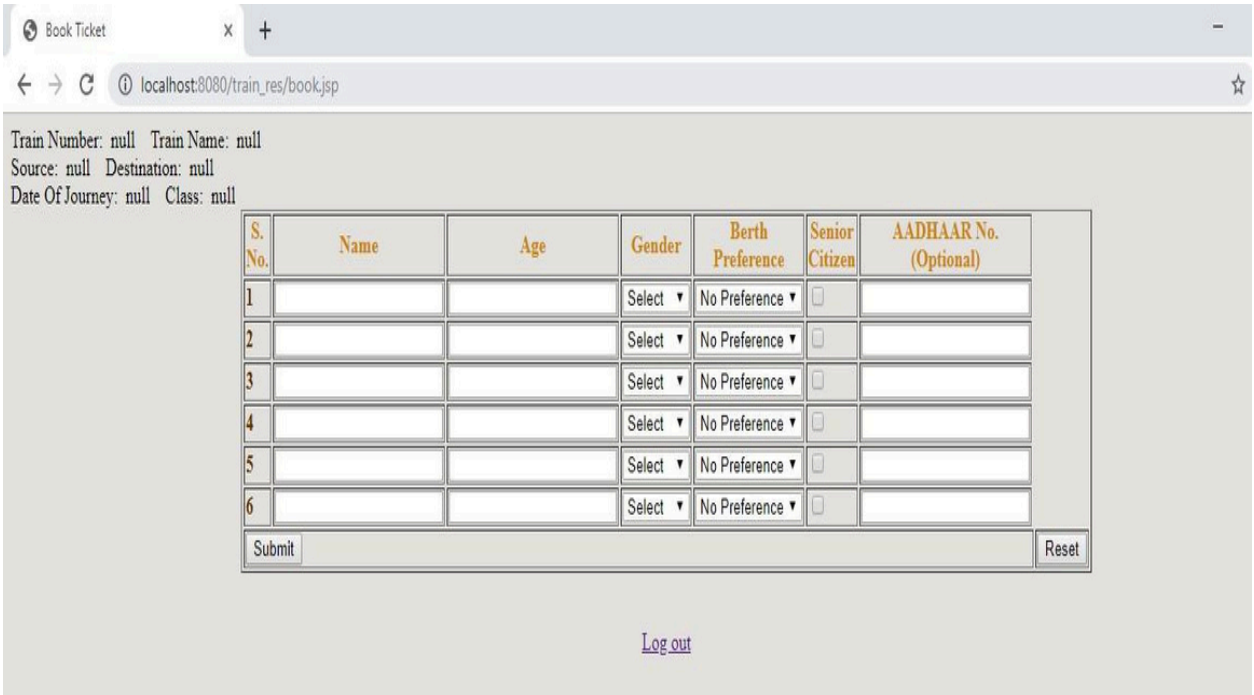

After login registration page is open and in this page details PERSONAL DETAILS which is filled by user.

They have to give a user id and password to login.

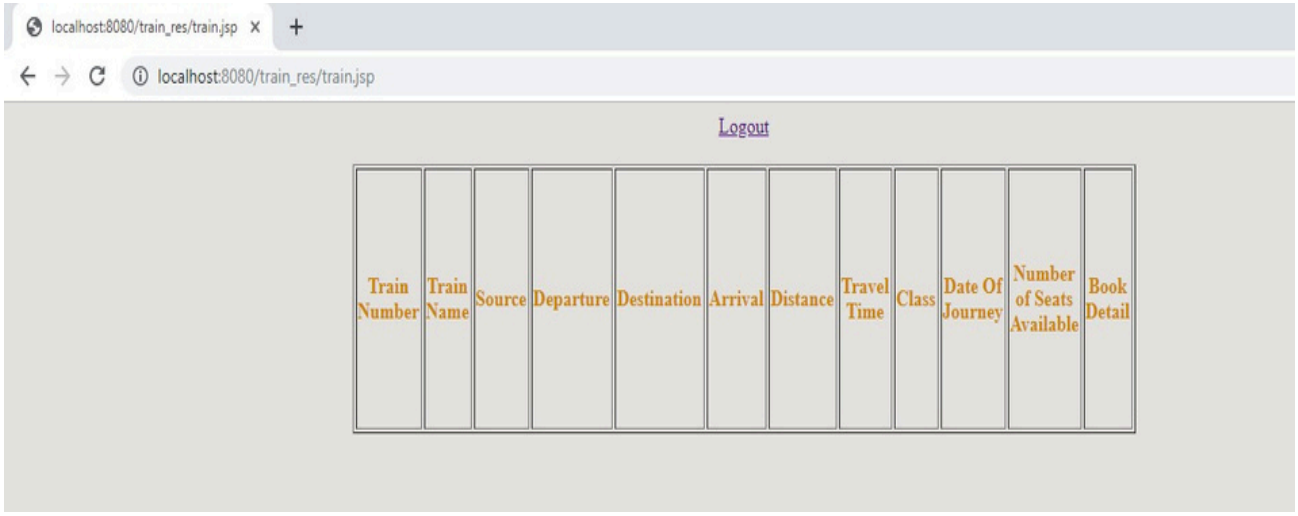

SEARCH TRAIN PAGE

Here user find the train detail and to press the "Submit" option for booking the ticket.

TRAIN BOOKING PAGE

Here user can book the train by giving name , age, gender, berth preferences, adhaar number(optional) and to press the “Submit” option for booking the ticket.

TRAIN BOOKING DETAILS PAGE

Here user can see the all booking details, train timing, date of journey etc.

TRAIN BOOKING HISTORY PAGE

Here user can find the history of train booking detail and to press the “logout” option for logout the page.

10. CONCLUSION

Online train ticket management system was successfully designed and developed as per the specifications. It was extensively tested using a database which contains data similar to what can be expected in an actual database. The system was found to work satisfactorily without any errors under all conditions.

This system is designed to help the people to book train any time, cancel ticket, check availability of train, print the ticket, and also can check the history to ticket booking.

This project will help the passengers to save their time; they need not to go to station for booking ticket or to check the availability. They can book or checkor cancel them while sitting in the home.

SUMMARY OF ACHIEVEMENTS

The following achievements were made during the project:

- We had the opportunity to learn a new technology JSP.net
- Learned to work in ***eclipse 2018-19***.
- We learned to handle a project efficiently and correctly.
- Learned to tackle various adverse situations while managing and developing software.
- Learning about the functioning of the IT industry and work ethics in the corporate world.
- Learning to work with MS SQL Server 2005.
- Learning about the different phases of software development and the software engineering processes involved in the development of software.
